TITLE	A Report Card for the ABCs of Public Education: Growth and Performance of Public Schools in North Carolina, 2000-2001. Volume I.
INSTITUTION	North Carolina State Dept. of Public Instruction, Raleigh. Div. of Accountability Services/Research.
PUB DATE	2001-10-04
NOTE	194p.; Prepared by the Reporting section of the North Carolina State Department of Public Instruction's Division of Accountability Services. For volume I of the 1997-1998 report, see ED 428 111. Cover page title varies.
PUB TYPE	Numerical/Quantitative Data (110) -- Reports - Descriptive (141)
EDRS PRICE	MF01/PC08 Plus Postage.
DESCRIPTORS	*Academic Achievement; Academic Standards; Accountability; *Achievement Gains; Elementary Secondary Education; *Public Schools; Report Cards; School Districts; *State Programs; Tables (Data); *Test Results; Testing Programs
IDENTIFIERS	*North Carolina

ABSTRACT

The North Carolina State Board of Education developed the ABCs of Public Education in response to the School-Based Management and Accountability Program enacted in 1996. The ABCs focuses on accountability with an emphasis on high educational standards, teaching the basics, and maximum local control. This document reports the results of the 2000-2001 ABCs, which involved 2,157 schools assigned an ABCs status. The first section of the report, "Growth and Performance of Schools," presents the growth and performance of all nonalternative schools in North Carolina participating in the ABCs. Other sections, "Schools of Excellence," "Schools of Distinction," "25 Most Improved K-8 Schools," "10 Most Improved High Schools," "Schools Making Exemplary Growth," "Schools Making Expected Growth," and "Low-Performing Schools" follow. Charter schools with sufficient data to participate in the ABCs appear where appropriate in the previous sections and also in a separate section, "Charter Schools," for easy reference. Alternative schools appear in a separate section, and special education schools, vocational/career centers, and hospital schools also appear in a special section of the report, as do "Schools with Unresolved Data Issues" and "Schools Not Included." The appendix includes an explanation of adjustments for special ABCs conditions and supplemental information about the report process. (Contains 13 tables.) (SLD)

A Report Card for the ABCs of Public Education Volume I:
2000 - 2001 Growth and Performance of Public Schools in North Carolina

Executive Summary

Background

The State Board of Education (SBE) developed the ABCs of Public Education in response to the School-Based Management and Accountability Program enacted by the General Assembly in June 1996. The ABCs focuses on: strong accountability with an emphasis on high educational standards; teaching the basics; and maximum local control.

The first ABCs accountability model was implemented in elementary and middle schools in 1996-97. A high school accountability model was developed during 1996-97, and was implemented for the first time in 1997-98. In 1998-99 the two models were combined into one comprehensive ABCs model for elementary, middle and high schools. In 1999-2000 this model was implemented again, augmented by a new policy for participation of alternative schools. Additionally, the 1999-2000 accountability year was the first year of reporting ABCs results for schools that are administered by the Department of Health and Human Services and the Department of Juvenile Justice and Delinquency Prevention.

In the 2000-2001 school year, the ABCs accountability model was fine-tuned in response to input from schools and school districts, actions of the SBE, and experience with previous years' ABCs. Modifications included the following:

a) implementing End-of-Course (EOC) prediction formulas for the 10 multiple choice EOC tests;
b) including ABCs dropout rates in the growth composite for high schools;
c) adding Computer Skills test results at grade 8 to the performance composite;
d) adding Alternate Assessment Portfolio results to the performance composite;
e) removing Writing at grades 4 and 7 from the growth composite (but they remain a part of the performance composite);
f) weighting the growth composite;
g) and, using the results of an equating study (described below) to include new mathematics test results in the ABCs (both growth and performance).

The ABCs accountability program sets growth and performance standards for each elementary, middle, and high school in the state. End-of-grade (EOG) and EOC test results and selected other components are used to measure the schools' growth and performance. Schools that attain the standards are eligible for incentive awards or other recognition (including Schools of Excellence, Schools of Distinction, 25 Most Improved K-8 Schools or 10 Most Improved High Schools in Academic Growth). To be eligible for incentive awards, schools also must not have excessive exclusions from testing and must test at least 98% of their eligible students in K-8, and at least 95% of students enrolled in specific courses or grades in high school. Schools where growth *and* performance fall below specified levels are designated as low-performing.

8

2000-2001 Mathematics Tests Equating Study

In May of 1998, the State Board of Education (SBE) adopted a new K-12 mathematics curriculum. A transitional curriculum was implemented in 1999-2000 involving the teaching of the old and new mathematics curricula to accommodate both operational testing and the development of new mathematics tests. Using the mathematics field test data from spring 2000, the new (2nd Edition) mathematics tests were assembled and were administered for the first time in the spring of 2001.

In the ABCs, growth is calculated from year to year. So it was necessary to conduct a special equating study during the summer 2001 to be able to convert the 2nd edition mathematics scale scores to equivalent scores on the old mathematics scale. Once the two series of tests were equated, the existing ABCs growth formulas could continue to be used for the 2000-01 ABCs. This same study was used to create revised achievement levels for the EOG mathematics tests. (Interim achievement levels set earlier based on the 2000 field test data turned out to be too low for use with the ABCs. See *Achievement Levels* in the appendix.)

Two groups of analysts worked independently conducting equating studies during the summer of 2001 for the EOG mathematics tests. "Equipercentile" equating was used. In this method, the percentiles of each score distribution (i.e., for the old and new mathematics tests) are calculated and scores that correspond to the same percentile ranks are equated. (See *2000-2001 Equating Study Results Grade 3 Mathematics* in the appendix).

Because interim achievement levels were set too low, on May 24, 2001, the SBE formed an Ad Hoc Committee to take immediate actions to audit the NC Testing and Accountability Program. A panel of technical experts with advice from the Southern Regional Education Board (SREB) worked with the ad hoc committee to oversee the audit process. After reviewing the equating process for the old and new mathematics tests, reviewing the process used to field test and set cut scores, and reviewing the process used to calculate ABCs school performance, it was determined on September 7, 2001 that the technical process being used to compute school-by-school performance for the ABCs was sound. The ad hoc committee of the SBE accepted the report and directed the Department of Public Instruction to proceed with ABCs reporting.

With this approval, the 2nd edition mathematics scores were converted onto the old mathematics scale and the existing ABCs growth formulas were used to calculate ABCs status (with minor modification of the growth model for fall to spring growth in the third grade, because both pre and post scores in third grade were on the new mathematics scale.) Similarly, the revised achievement levels based on the equating study were used to compute performance composites for the 2000-01 ABCs.

Participating schools

In 2000-2001, every school that contained one or more of the grades 3-12 and that submitted the appropriate data participated in the ABCs. K-8 schools' data include test results [illegible] reading, mathematics, writing in grades 4 and 7, Computer Skills at grade 8, Alternate Assessment Portfolio and EOC tests if the subject(s) are taught in the school. High schools' data include EOC test results, North Carolina High School Comprehensive Test results (NCHSCT), Alternate Assessment Portfolio, percent of students completing

College University Prep/College Tech Prep courses of study, change in ABCs dropout rates, and change in competency passing rates.

K-2 schools sending more than half of their students to a single receiving school were eligible for incentive awards if the receiving school earned an incentive award based on making its growth standard.

Alternative schools followed a special plan of inclusion in the ABCs in 2000-2001. Accountability in these schools was based on achievement data (EOC, EOG, NCHSCT, competency passing rates) and on three locally selected accountability measures. These "local options" were selected objectives that were specified on school improvement plans and approved by the local boards of education. The status and incentive awards for alternative schools were determined using the criteria specified in State Board of Education Policy HSP-C-013. Results are reported here in a special section for alternative schools.

Special education schools, vocational/career centers and hospital schools were considered for incentive awards based on the performance of the schools they served. They received prorated incentive awards on this basis. These schools appear in a special section of the report.

Analyses

The status of schools and incentive awards were determined by the values of three weighted composite scores in the ABCs. They are the expected growth composite, the exemplary growth composite, and the performance composite. These composite scores consisted of many components, depending on the grade span and curriculum of the school, as follows.

Expected growth composites include as many of the following as apply in a given school:

- growth in EOG reading and mathematics for grades K-8 and grade 10 based on three factors: statewide average growth, the previous performance of students in the school, and a statistical adjustment which is needed whenever test scores of the same students are compared from one year to the next,
- growth in high school EOC performance based on EOC prediction formulas
- change, or gain over a two-year baseline in English II,
- change over a two-year baseline in the percent of students completing college university prep/college tech prep courses of study,
- change from grade 8 to grade 10 in the competency passing rate,
- change in ABCs dropout rates from 1998-99 to 1999-2000.

Exemplary growth composites include as many of the above as apply in a given school. However, the exemplary standard factors in an additional ten percent above the statewide average growth for grades 3-8 and 10, and an additional 3% above the statewide average used in the EOC prediction formulas. For English II, the exemplary growth standard requires an additional 5% over the baseline for expected growth. There is no exemplary growth standard for the competency passing rate, the change in the percent of college university prep/college tech prep completers or the change in ABCs Dropout rate.

The performance composite is based on the percentage of scores at Achievement Level III or above in reading, mathematics, writing in grades 4-7, North Carolina Alternate Assessment Portfolio (NCAAP), Computer Skills Test at grade 8, and specific courses and grades in high schools. Student test scores in Algebra I and II, Biology, Chemistry, English I and II, ELPS, Geometry, Physical Science, Physics, U.S. History, and the High School Comprehensive Test are included in the performance composite. The Algebra I scores of ninth graders who took Algebra I prior to ninth grade *are* included in the high school's performance composite. *(See Technical Notes in the Appendix for an explanation of how scores are handled in senior high schools and how the NCAAP scores are calculated).*

The ABCs results published here were produced on a Compaq Deskpro EN computer, Model ENC/P1.0/20e/6/256cvn, Pentium III processor with 261 MB RAM running under Microsoft Windows 2000 Vs. 5.002195. Additional detail and technical information about ABCs analyses are provided in the Appendix.

Definition of Awards and Recognition Categories

Schools were classified into several categories for the purpose of awarding incentives and recognition. The award or recognition a school receives is determined in most cases by the school's attainment as reflected in the growth composites (expected and exemplary) and the performance composite. (Exceptions include K-2 feeder schools, alternative schools, and special schools). The categories are defined as follows.

Schools of Excellence

A School of Excellence is a school that made expected growth and had at least 90 percent of its students' scores at or above Achievement Level III. Such schools will receive a dated banner to hang in the school and a certificate. In addition, they will receive whatever incentive award they earn as having made expected or exemplary growth.

Schools of Distinction

A School of Distinction is a school that had at least 80 percent of its students performing at or above Achievement Level III irrespective of growth (but does not qualify as a School of Excellence). Schools of Distinction will receive a plaque and a certificate.

25/10 Most Improved Schools in Academic Growth

The 25 Most Improved K-8 schools are those that attained the State's 25 highest values on the exemplary growth composite. The 10 Most Improved High Schools attained the State's 10 highest values on the exemplary growth composite. (Any school with a combination of grades which includes grade 9 or higher was eligible for the high school recognition rather than the K-8.) These schools will receive a dated banner to hang in the school, a certificate and financial awards.

Schools Making Exemplary Growth

These schools attained their exemplary growth standard. They will receive a certificate and incentive awards. Incentive awards for making exemplary growth are $1500 per person for certified staff and $500 per person for teacher assistants.

11

Schools Making Expected Growth

These schools attained their expected growth standard (but not their exemplary growth standard). They will receive a certificate of recognition and financial awards. Incentive awards for making expected growth are $750 per person for certified staff and $375 per person for teacher assistants.

Schools with No Recognition

These schools did not make their expected growth standards; *but* they have at least half their students scoring at or above Achievement Level III as measured by the performance composite.

Low-Performing Schools

Low-Performing Schools are those that fail to meet their expected growth standard and have significantly less than 50% of their students performing at or above Achievement Level III.

In addition to the growth and performance standards, there are testing requirements that all schools must meet. K-8 schools must test at least 98% of their eligible students. High schools must test at least 95% of all students enrolled in courses/grades for which EOC tests or the NCHSCT are given respectively.

In this report, schools that violate testing requirements are assigned a violation status and cannot receive another ABCs status, except low-performing. The low-performing schools that violate testing requirements are assigned the low-performing status in addition to the violation status.

Schools that violate any of the testing requirements are not eligible for financial awards. In addition, the State Board of Education may designate schools that violate testing requirements for two consecutive years as low-performing.

Presentation of Results

The results are presented in *A Report Card for the ABCs of Public Education Volume I: 2000-2001 Growth and Performance of Public Schools in North Carolina*. The first section of this report, Growth and Performance of Schools presents the growth and performance of all non-alternative schools in North Carolina participating in the ABCs. Other sections, Schools of Excellence, Schools of Distinction, 25 Most Improved K-8 Schools, 10 Most Improved High Schools, Schools Making Exemplary Growth, Schools Making Expected Growth, and Low-Performing Schools, follow. Charter Schools with sufficient data to participate in the ABCs appear in the previous sections where appropriate and are also included in a separate section, Charter Schools, for easy reference. Alternative schools appear *only* in a section designated Alternative Schools. Special education schools, vocational/career centers, and hospital schools also appear in a special section of the report. Schools that were unable to submit complete data before the processing deadlines are included in a section called Schools with Unresolved Data Issues. In sections of the report where appropriate, a status column indicates each school's ABCs status or failure to meet testing requirements. North

Carolina public schools that are not included in the ABCs because of data requirements are listed in the final section, Schools Not Included.

The Appendix includes an explanation of adjustments for special ABCs conditions, a summary of standard conventions used in the ABCs analyses in Technical Notes, a table of the values, called Constants and Parameters, used in the ABCs growth formula computations, an example of how the Alternate Assessment Portfolio results were incorporated into the performance composites, and the achievement levels and score conversions derived from the equating study.

Statistical Summary of Results

In the 2000-2001 implementation of the ABCs, 2157 public schools were assigned an ABCs status. These included traditional public schools spanning combinations of grades K-12; charter schools; alternative schools; and certain K-2 schools (those that fed more than 50% of their students into a single receiving school in 2000-2001). There were 30 special education, vocational/career centers and hospital schools that were not assigned an ABCs status, but participated on the basis of the schools that they served, as explained above. Schools that violated testing requirements were assigned a violation status and did not receive another ABCs status, except low-performing. There were three schools that violated testing requirements, one of which was low-performing and two of which were not assigned an ABC status. Fourteen schools were not included in the ABCs because they failed to meet data requirements, and one school had unresolved data issues at the time of publication. The results for schools that were assigned a status appear below.

ABCs Results for All Schools

	Number of Schools			
Award or Recognition Category	K-12	Alt.	Total	%
Schools Making Exemplary Growth	503	17	520	24.1
Schools Making Expected (not Exemplary) Growth	717	51	768	35.6
Schools Receiving No Recognition	836	0	836	38.8
Low-performing Schools	30	1	31	1.4
95R, No Status	1	1	2	.1
Total ABCs Schools	2087	70	2157	100.0

13

In addition, the following numbers of schools received special recognition. (These categories may overlap categories in the above table.)

Schools Receiving Other Recognition

Category	Number of Schools	Percent of Schools
Schools of Excellence	171	7.9
Schools of Distinction	640	29.7
25 Most Improved K-8 Schools	25	1.2
10 Most Improved High Schools	10	0.5

Overall, 59.7% of the public schools made either expected or exemplary growth standards under the 2000-2001 ABCs Accountability model.

2000-2001
Adjustments for ABCs Special Conditions

Condition	code	ABCs Adjustment
K-2 feeder	1	A K-2 feeder school serves only students in kindergarten, first grade, or second grade and sends more than half its students to one receiving school that has a third grade. ABCs awards are based on the performance of students in the school that receives the K-2 students. The K-2 feeder can make expected growth, exemplary growth, or receive no recognition. K-2 schools cannot receive recognition as a Most Improved School in academic growth, School of Excellence/Distinction, or be identified as a low-performing school.
Senior high schools	2 3	Senior high schools (schools with grades 10-12 only) have two options for participation: 1) Grades 9-12 option: Grades 10-12 data can be combined with Grade 9 data from feeder junior high schools. - All courses and components are part of the model; - Algebra I scores of ninth graders who took the course while in grades 7 or 8 *are included* when computing the performance composite; and incentive awards are prorated to reflect the special arrangement. 2) Grades 10-12 option: - English I and Economic, Legal, and Political Systems (ELPS) are not included unless more than 10% of students in grade 10 take English I or ELPS respectively, and - Algebra I scores of tenth graders who took the course while in grades 7, 8, or 9 are included when computing the performance composite.
Data requirements	9	Schools have insufficient data when there are fewer than 30 students and/or scores contributing to the growth composite. If schools (other than Alternative/Special Schools) have insufficient data then they are not included in the ABCs.

Technical Notes: Standard Conventions used in the 2000-2001 ABCs Analyses

98% Rule. K-8 schools must test at least 98% of eligible students. Eligible students are those who are not excluded from an End-of-Grade test according to the rules and procedures governing the testing program. A composite percentage of eligibles tested is computed by combining information from reading, mathematics and alternate assessments across all grades in a school. (**Note**. Students who registered for the North Carolina Computer Adaptive Testing System (NCCATS), or the North Carolina Alternate Assessment Portfolio (NCAAP), or the North Carolina Alternate Assessment Academic Inventory (NCAAAI) are credited as having been tested). The final composite must be greater than or equal to 98, when rounded to the nearest whole number. Schools identified as having violated the 98% rule are asked to justify their rate. The explanations are reviewed by DPI, and either accepted or rejected. If rejected, the school is assigned a 98R status, which means the school is in violation of the rule and ineligible to receive incentives or recognition. A school in violation for two consecutive years may be identified as low-performing by the State Board of Education. In this report, schools that violate testing requirements are assigned a violation status and cannot receive another ABCs status, except low-performing.

95% Rule. High schools must test at least 95% of the students in membership in grade 10 and enrolled in courses for which there are End-of-Course (EOC) tests. A composite percentage of students is computed by combining information from grade 10 membership, alternate assessments and enrollment in EOC courses. (**Note**. Students who registered for the North Carolina Computer Adaptive Testing System (NCCATS), or the North Carolina Alternate Assessment Portfolio (NCAAP), or the North Carolina Alternate Assessment Academic Inventory (NCAAAI) are credited as having been tested). The composite must be greater than or equal to 95, when rounded to the nearest whole number. Schools in violation are asked to justify their rate. The explanations are reviewed by DPI; and accepted or rejected. If rejected, the school is assigned a 95R status, which means the school is in violation of the rule and ineligible to receive incentives or recognition. A school in violation for two consecutive years may be identified as low-performing by the State Board of Education. In this report, schools that violate testing requirements are assigned a violation status and cannot receive another ABCs status, except low-performing.

Algebra I Scores in the Performance Composite. Algebra I scores for current ninth graders who took Algebra I prior to their ninth grade year are included in the performance composite for the high school where they are currently enrolled. Algebra I scores of students in the middle school grades (6, 7, or 8) during the current school year are included in the K-8 performance composite of the middle school where they are currently enrolled. Algebra I scores of students currently enrolled in grade 10 in a senior high school (Grades 10-12) who took Algebra I while in grades 7, 8, or 9 are included in the performance composite of the senior high school.

Confidence Interval Applied to the Performance Composite in Low-Performing Schools. The performance composite is the percent (proportion) of students in a school who score at or above grade level (i.e., in Achievement Levels III or IV) on end-of-grade and/or end-of-course tests. The performance composite is computed by adding all scores at or above Achievement Level III on each of the tests, and then dividing the sum by the total number of valid scores on the tests. The result is one of the factors used in determining low-performing school status. If a school does not make expected growth *and* less than half its students are performing at or above grade level, the school is low-performing.

The confidence interval is a way of taking into account the statistical fluctuations that occur from year to year in small schools or schools with highly variable scores. The confidence interval itself will be narrow or wide depending on the size of the school and the variation in the scores that make up the performance composite. In general, the confidence interval is narrower when the number of students is larger, or the scores are more homogeneous; conversely, the confidence interval is wider when the number of students is smaller, or the scores are less homogeneous.

This means it is possible that a potentially low-performing school has a performance composite that is considerably below 50% but that school is not considered low-performing because the confidence interval for that school is wide (i.e., there is less confidence in the value of the performance composite). This situation would likely be true for a school that has few students or has wide variation in test scores. Conversely, it is possible that a school has a performance composite that is fairly close to 50% and is considered low-performing because the confidence interval for that school is very narrow (i.e., there is high confidence in the performance composite). This situation would likely be true for a school that has a large number of students or students all have about the same test score.

As long as the value, 50, lies within or on the boundary of the confidence interval for an observed performance composite, then the performance composite is not significantly less than 50 and hence the school is not classified as low-performing.

Excessive Exclusions. Another testing requirement of schools in the ABCs is that they must not have excessive exclusions. Student exclusions from testing must be consistent with federal and state guidelines for students with disabilities and students appropriately identified as Limited English Proficient. Please refer to relevant testing program guidelines specified in *Testing Modifications and Accommodations for Students with Disabilities* and *Guidelines for Testing Students with Limited English Proficiency,* and the updates to these guidelines, which were disseminated during 2000-2001 through the following memorandums to LEA superintendents:

- *Changes to Guidelines for Testing Students with Disabilities (September 19, 2000),*
- *Changes to Guidelines for Testing Students with Limited English Proficiency Effective 2000-2001 (February 16, 2001), and*
- *End-of-Grade Testing for Students with Disabilities; Use of End-of-Grade and End-of-Course Tests in Promotion Decisions or Course Credit Decisions for Students with Disabilities; Procedures for Review of Requests for Waiver of Promotion Standards (March 29, 2001).*

Exclusions are determined at the school on a case by case basis and they must be documented in Individualized Education Programs (IEPs). A composite index for exclusions is computed for every school; when this index is greater than the state average exclusion rate plus two standard deviations (determined from the distribution of school exclusion rates), they are considered excessive. (**Note**. Students who registered for the North Carolina Computer Adaptive Testing System (NCCATS), or the North Carolina Alternate Assessment Portfolio (NCAAP), or the North Carolina Alternate Assessment Academic Inventory (NCAAAI) are credited as having been tested).

To compute the exclusion rate in a K-8 school, information from reading and mathematics EOG, alternate assessments and EOC information if appropriate across all grades in a school are combined in a composite index. For high schools, EOC data, North Carolina High School Comprehensive Test (NCHSCT) information and alternate assessment information if appropriate are combined to form a composite index.

Schools identified as having excessive exclusions are asked to justify their exclusion rate; explanations are reviewed by DPI, and accepted or rejected. If rejected, the school is assigned an EE status, and cannot receive incentives or recognition. A school that has excessive exclusions for two consecutive years may be identified as low-performing by the State Board of Education.

Equating Study. In May of 1998 the State Board of Education (SBE) adopted a new K-12 mathematics curriculum which necessitated development of new mathematics tests. The Testing Section of the Division of Accountability Services developed EOG field test items for mathematics in 2000, and the "new" mathematics tests at grades 3-8 were administered in the Spring of 2001. As early as January, 1999, the Department of Public Instruction informed the SBE of the need to conduct an equating study to link the old mathematics test (1st edition) and the new mathematics test (2nd edition) to enable use of the ABCs formulas for the 2000-2001 school year.

Two groups of analysts worked independently analyzing the equating data during the summer of 2001 for the EOG mathematics tests. The groups were Dr. David Thissen and his staff at the L.L. Thurstone Psychometric Laboratory (UNC-CH) and, the Reporting Section of the Division of Accountability Services. After determining the adequacy of the equating samples, equipercentile equating was used. This method calculates the percentiles of each distribution of the old mathematics test and the new mathematics test and equating scores corresponding to the same percentile ranks.

The groups conferred and compared results in early August. An audit panel of outside technical experts appointed by the SBE reviewed the methodology and results on August 16 -17 and reported to the SBE Ad Hoc Committee on September 7. The panel concluded that the technical process used to compute the equating study was sound. The Ad Hoc Committee of the SBE accepted the report and directed the Department of Public Instruction Accountability Services Division to proceed with the compilation of the ABCs report. With the sign-off of the technical process to equate the new mathematics test scores with the old ones, achievement level cut scores also were revised and the new achievement levels are used in the ABCs results for 2000-2001.

Parameters and Other Constants Used in the ABCs End-of-Grade Growth Model for 2000-2001

Physics		182.0		63.7	61.6	3.321596

* Means are based on all students in the school with scores for the predicted EOC and all other EOG/EOC tests used as predictors.

Constants Used in the ABCs Growth Model for End-of-Course

Component of Growth Composite	Standard Deviation of change for expected growth composite	Standard Deviation of change for exemplary growth composite
English II	7.6	7.5
Competency Passing Rate	12.8	12.8
College Prep/College Tech Prep %	10.0	10.0
ABCs Dropout Rate	2.0	2.0

How to Include the North Carolina Alternate Assessment Portfolio (NCAAP) Results in the School Performance Composite

The NCAAP has four domains: Communication (C), Personal Home Management (PHM), Community (COM), and Career/Vocational (C/V). Each domain receives a score of .25 for a total possible score of 1.00 if a student is proficient in all four domains. A student must receive a 3 or 4 in a domain to be counted as proficient in that area. The student's proficiency score is derived from the following scale:

1=Novice; 2=Apprentice; 3=Proficient; and 4=Distinguished

The resulting sum of scores across the four domains of NCAAP contributes to the school's performance composite score for the ABCs. Table 1 shows possible NCAAP data for two students in a school.

Table 1

	A Communications	B Personal Home Management	C Community	D Career/Vocational	E Number of Domains Proficient	F Proficient Score E/4(# of Domains)
Student (1)	*NP	**P	P	NP	2	.50
Student (2)	NP	NP	NP	NP	0	.00
Total # Of (P)	0	1	1	0	2	.50

*NP = Not Proficient
**P = Proficient

Example: For a K-5 Elementary School Performance Composite at grade 4 for Reading, Math, Writing and NCAAP.

The performance composite for any school is the total number of scores at or above Level III (or at or above grade level) in each subject included in the ABCs model, divided by the total number of valid scores. The performance composite is reported as a percentage. In Table 2, the NCAAP performance for the two students in Table 1 is included in the school's performance composite.

The first row represents the total number of scores at or above Level III (numerator) as reported for each subject area and for the NCAAP. In the second row, the total number of valid scores (denominator) or number of students who were tested in each subject area or participated in the NCAAP at this particular school are included. To obtain the performance composite, divide the total number scores at or above Level III by the total number of valid scores or number of students who took the test and participated in the NCAAP. Multiply the product by 100 to yield the performance composite score for this school.

Table 2

	R	M	W	NCAAP	Total	Performance Composite
Scores at or above Level III	117	161	40	.50	318.50	**.68 x 100 = 68.00%**
Total (N) Students	200	201	64	2	467

	8	235-253	254-260	261-271	272-310

Subject/Grade	Level I	Level II	Level III	Level IV
Writing 4 & 7	0.0-1.0	1.5-2.0	2.5-3.0	3.5-4.0

Achievement Level Descriptions:

Level I: Students performing at this level do not have sufficient mastery of knowledge and skills in this subject area to be successful at the next grade level.

Level II: Students performing at this level demonstrate inconsistent mastery of knowledge and skills in this subject are and are minimally prepared to be successful at the next grade level.

Level III: Students performing at this level consistently demonstrate mastery of grade level subject matter and skills and are well prepared for the next grade level.

Level IV: Students performing at this level consistently perform in a superior manner clearly beyond that required to be proficient at grade level work.
